WHAT IS RED-i?

Red-i is an exciting patented and innovative designed boresight that assists the hunter or marksman to set a riflescope with precision and ease. It is cost-effective and noiseless. With the new firing pin activated system (short flash system) the Red-i unit can now also be used for indoor training purposes.

Made of solid brass and stainless steel for maximum durability, each Red-i unit is calibrated for accuracy.

HOW DOES RED-i WORK?

As a Boresight

After zeroing your weapon with live ammunition, carefully insert the Red-i cartridge into the magazine. Feed the Red-i cartridge into the chamber and close the bolt. The Red-i is now activated. Aim the projected beam onto a target at a distance of ± 25 meters / 32 yards (suggested sighting distance). Memorize and document the position of the laser dot on the target in relation to the sights or crosshairs of the telescope. This relation of the dot to the crosshairs will never change. This needs to be done once only.

Firing Pin Activated Training (Short-Flash System)

Change the stainless steel end caps and feed the Red-i carefully into the chamber. Close the bolt and aim onto a target and pull the trigger. Your short flash training system will light up for approximately 20 milliseconds where you hit the target.

HAS IT BEEN TESTED?

A randomly selected quantity of units were subjected to various environmental and other tests in terms of the Design Qualification Test Specification of Armscor and Gerotek (a SANAS accredited test laboratory). Red-i conformed to the requirements in all areas and was certified.

WHAT CALIBERS ARE AVAILABLE?

We now have more than 100 different calibers from 223 Rem (5.56 Nato) to 700 Nitro all of the shelf. All shotgun calibers and handgun calibers, larger than 9mm. Any other caliber specified in the CIP Specifications Handbook, on order. A wide range of interchangeable calibers larger than 30-06.

WHOM TO CONTACT?

Red-i has offices in the USA, UK and South Africa. Distributors have been appointed in the following countries - USA, UK, Spain, Italy, France, Japan, Russia, Australia, Holland, Middle East, etc. Details can be viewed on the website at www.red-i-laser.com
